

Data Security Policy: Financial Transactions

1. Overview

This policy specifies security regulations, data governance rules, and field descriptions for the financial transactions tables (`transactions` and `raw\_transactions`). These tables record all user purchases, payments, and shopping cart checkouts.

2. [NOISE] Office Supplies Expense Guidelines

To request office supplies (notebooks, pens, desk lamps, monitors), submit a ticket on the IT portal. Purchases under \$50 do not require pre-approval. For travel reimbursement, upload your flight receipts to the finance dashboard within 14 days of travel.

3. Column Specifications and Classifications

The following table defines the transaction dataset columns, their business purposes, and security rules:

Column Name	Type	Business Description	Security Classification
transaction_id	STRING	Primary key. Unique payment confirmation number.	None (Public Ref)
order_id	STRING	Foreign key linking the transaction to an order.	None (Public Ref)
product_id	STRING	Foreign key referencing the purchased item.	None (Public Ref)
quantity	INTEGER	Number of units purchased in the transaction.	None (Metric)
amount	FLOAT	The financial value of the transaction in USD.	Sensitive (Requires Financial Policy Tag)

4. [NOISE] Upcoming Office Holidays

The corporate headquarters will be closed on January 1 (New Year's Day), March 17 (St. Patrick's Day), and December 25-26 (Christmas and St. Stephen's Day). Normal operations resume the following working days.

5. Audits and Enforcement

All transactions are logged under strict financial reporting compliance. The `amount` column must be restricted to members of the Finance team and tagged appropriately to trigger column-level masking.
